A Weekly Newsletter of Nu'uaniu Congregational Church

Welcome Rev. Jeannie Thompson

We welcome Rev. Jeannie Thompson to NCC this morning. We hope you had a chance to meet her at one of the sessions that were held on Friday and Saturday. There will be a short Question and Answer period at the end of the service for those who were unable to attend one of the sessions.

Following the worship service, there will be a Special Congregational Meeting in the sanctuary to consider the question of whether, pursuant to the Amended By-Laws, Article IX (9), Section 1, The Reverend Jeannie D. Thompson shall be called for a term of four (4) years to serve as the settled pastor of Nu'uaniu Congregational Church.

Note: only active members may vote per NCC By-Laws. Please sign in.

Annual Congregational Meeting - January 26, 2020

Save this date! The Annual Congregational Meeting will follow the worship service at 10:30 a.m. in the sanctuary next Sunday. Agenda details were mailed out in the letter of notice. Note: only active members may vote per NCC By-Laws.

Shingles Shot

You may be aware that there has been a nationwide shortage of the newest shingles vaccine, with wait lists of many months to receive the doses. The folks from Long's who did the flu shot clinic for us last year have received a shipment of Shingrex. They are willing to hold the vaccines for two weeks and people can receive the shots at the Long's at 988 Halekauwila Street, phone 913-6996. You will need to provide your name, birth date, doctor's name (if you want a copy faxed to the MD), insurance information, and preferably a phone number (for copay communications). Long's will research whether or not your insurance will cover the vaccinations and what your copay would be. If twelve people sign up, they are willing to come back to our campus to administer the vaccine here.

For those unfamiliar with the vaccine, it is recommended for the protection of shingles in adults 50 years and older. It is a two shot series; the second shot is administered 2-6 months after the first shot. It came out in early 2018 and has a much higher efficacy rate (>90%) than the old Zostavax shot that some of you may have had previously. Current recommendations are to get Shingrix even if an individual may have had Zostavax previously. Shingles is a very painful condition. This vaccination has been in very short supply and we are fortunate to have this opportunity to get immunized. Please let **Judy Keith** know if you are interested in receiving this immunization on campus. But if twelve people are not interested, you still have the opportunity to get the shots at Long's.
